COMMUNICATION PLAN

Date	19 October 2026
Team ID	
Project Name	Health360: Clinical and Healthcare Risk Analysis
Maximum Marks	1 Mark

Communication Plan

Clear and timely communication helps the Health360 team coordinate dashboard development, review sample healthcare indicators, resolve issues, and prepare project demonstrations. Updates will cover development progress, data quality, interface changes, testing, and responsible presentation of healthcare risk analytics. All displayed figures are illustrative sample data for educational demonstration, not clinical advice or diagnosis.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Stand-up	Daily / each work session	In-person or WhatsApp group	All team members	Share tasks, progress, blockers, and next steps.
2	Progress Update	Weekly	WhatsApp and GitHub Issues/README	Team; project guide as needed	Track completed features, pending work, and milestones.
3	Issue / Bug Discussion	As needed	VS Code, GitHub Issues, group chat	Developers, tester(s), relevant members	Reproduce bugs, assign fixes, and verify dashboard behaviour.
4	Stakeholder Review	Bi-weekly / milestones	Review meeting and live website	Team and project guide/reviewer	Collect feedback on usability, charts, filters, and risk-indicator clarity.
5	Final Demo Rehearsal	Once before submission	Laptop, browser, GitHub Pages	All team members and presenter	Check responsive layout, charts, filters, print view, and project explanation.
6	Data & Privacy Check	At each major update	Team checklist / GitHub review	Developer(s) and reviewer	Ensure sample data is labelled and no real patient-identifying information is included.

Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	Different understanding of features and task priorities.	Maintain a shared task list, clarify requirements in short meetings, and record decisions in the README or GitHub Issues.
2	Chart/filter bugs and layout differences across screen sizes.	Test changes at desktop and mobile widths, document reproducible steps, and verify fixes before merging.
3	Sample figures could be mistaken for real clinical results.	Label values as illustrative sample data, exclude personal patient information, and state that Health360 is educational—not a diagnostic tool.
