| Project Name | Health360: Clinical & Healthcare Risk Analysis |
| Maximum Marks | 5 Marks |

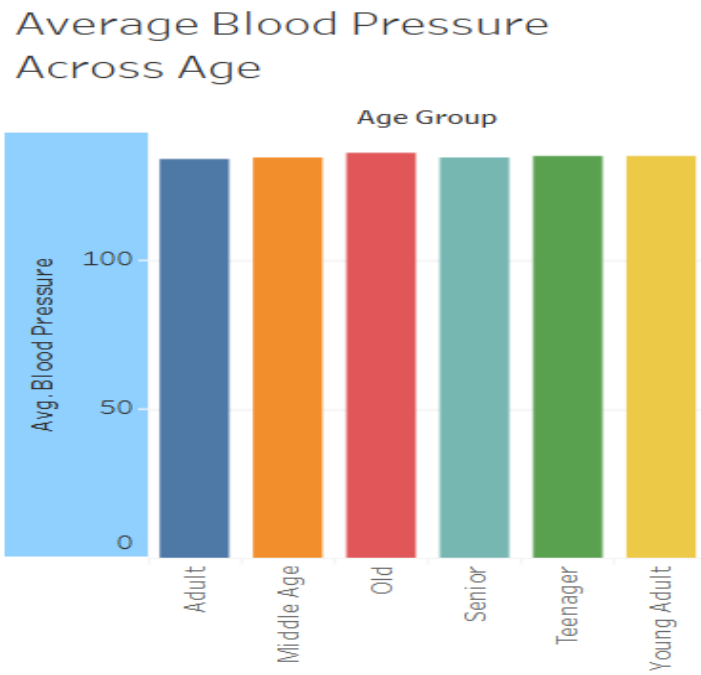

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting

## Business Questions and Visualisation

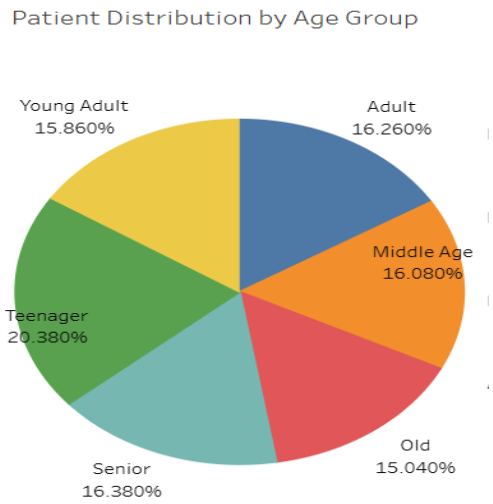

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

**Sample**

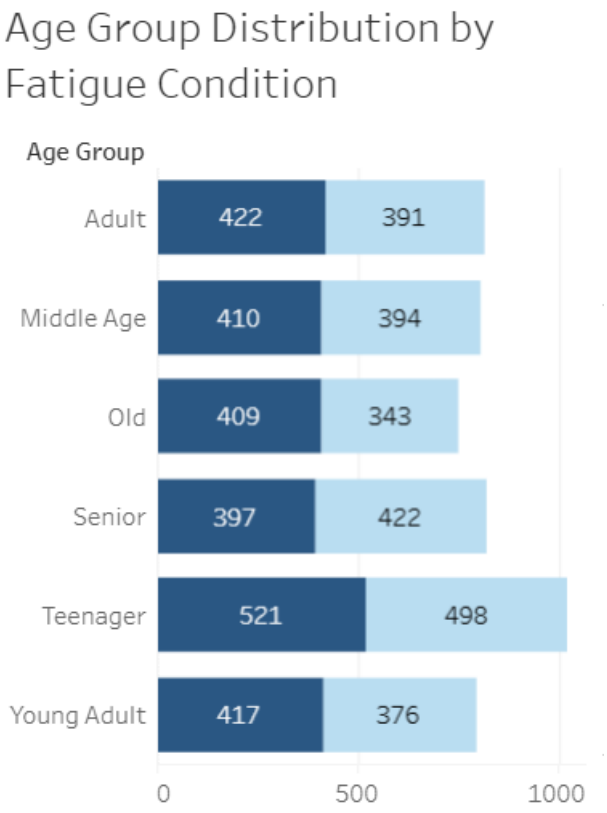

1. How does average systolic blood pressure vary across different age demographics?

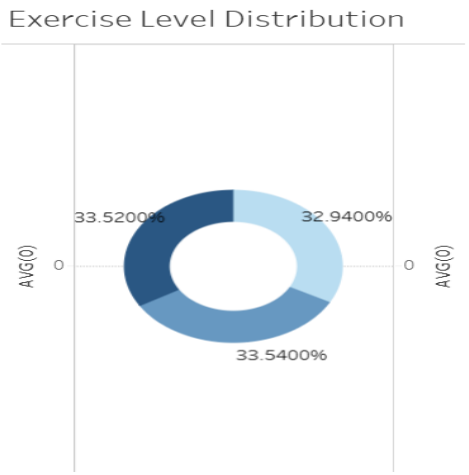

2. What is the proportion of patient population across each age cohort?

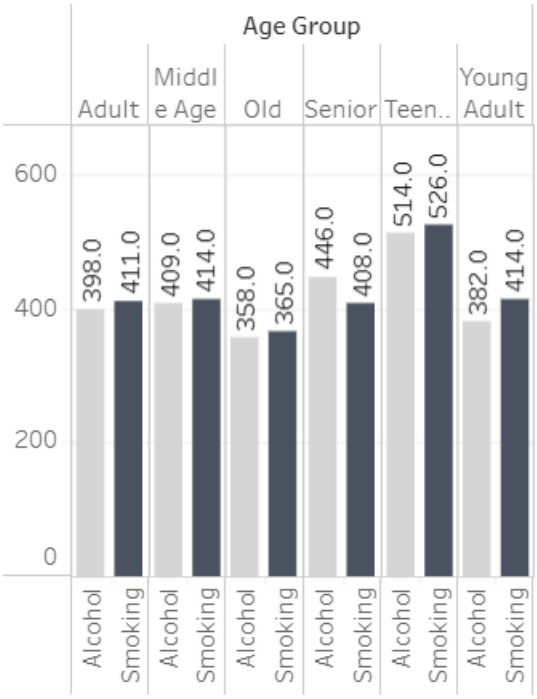

**3.** What is the prevalence and distribution of chronic fatigue among patients?

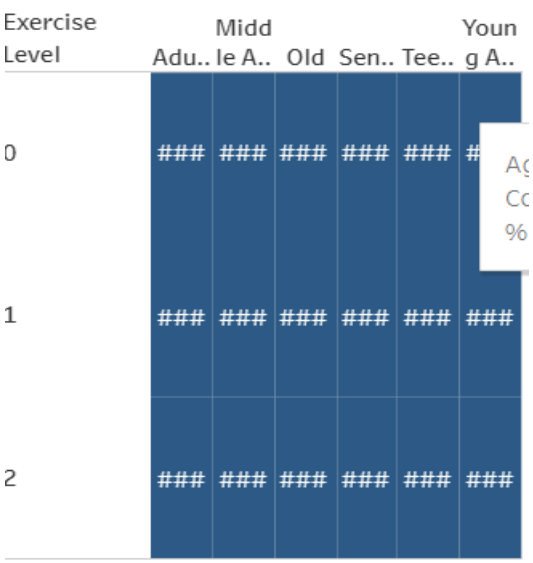

**4.** How does physical exercise frequency distribute across the patient population?

**5.** How do substance habits (smoking and alcohol) compare across demographic cohorts?

**6.** What is the combined impact of physical activity tiers and age groups on normalized health risk scores?
