Customer Journey Map

Metadata Field	Project Details
Date	19 October 2026
Team ID	LNDP-Health360-Analyst
Project Name	Health360: Clinical & Healthcare Risk Analysis
Maximum Marks	2 Marks

Overview & Guidance

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

End-to-End Journey Mapping

Phase of Journey	Stage 1: Data Ingestion & Clinical Assessment	Stage 2: Multi-Factor Risk Analysis	Stage 3: Preventive Intervention & Monitoring
Actions*(What does the customer do?)*	* Collects raw demographic vitals (BP, Fatigue, Age).* Accesses 5,000 patient records across 6 age groups.* Identifies baseline hypertension flags manually.	* Evaluates lifestyle risk factors (Smoking & Alcohol).* Cross-examines exercise levels (Level 0, 1, 2) against risk score.* Synthesizes multi-variable clinical correlations.	* Implements targeted preventive care programs.* Deploys community-level lifestyle interventions.* Tracks longitudinal recovery and vital stability.
Touchpoint*(What part of the service do they interact with?)*	* Electronic Health Records (EHR) / Patient Intake forms.* Raw CSV data tables (`smart_healthcare_dataset.csv`).* Clinical baseline intake workstations.	* Tableau Public interactive dashboards.* Web analytical portal (GitHub Pages live interface).* 6-pane diagnostic visual charts & heatmaps.	* Clinical summary reports & risk advisory bulletins.* Patient care consultation follow-ups.* 5-point clinical data story presentation.
Customer Thought*(What is the customer thinking?)*	* *"Manual entry and raw spreadsheets take too long to review."* * *"Critical hypertension trends might get buried in row data."* * *"Need a unified cohort view to categorize high-risk patients."*	* *"Are younger cohorts facing high fatigue due to sedentary lifestyle?"* * *"How strongly do smoking and alcohol impact overall health score?"* * *"Interactive charts will make risk profiling clear for clinicians."*	* *"Preventive actions will significantly reduce hospital admissions."* * *"Clinicians need automated alerts for high-risk age demographics."* * *"Centralized visual tracking makes preventive healthcare efficient."*
Customer Feeling*(What is the customer feeling?)*	**Overwhelmed & Anxious**Fatigued by manual spreadsheet analysis	**Engaged & Focused**Optimistic seeing clear visual patterns	**Confident & Relieved**Empowered with clear, actionable insights to

Phase of Journey	Stage 1: Data Ingestion & Clinical Assessment	Stage 2: Multi-Factor Risk Analysis	Stage 3: Preventive Intervention & Monitoring
	and worried about missing acute early symptoms.	emerge through interactive Tableau visualizations.	deploy effective preventive treatment plans.
Process Ownership*(Who is in the lead on this?)*	Clinical Data Intake Team & Triage Nurses	Clinical Risk Analyst & Data Visualization Specialist	Public Health Officer, Chief Medical Officer & Physicians
Opportunities*(How can we improve this stage?)*	* Automate data ingestion pipeline directly from health monitors.* Standardize vital collection protocols across all age cohorts.	* Embed real-time Tableau API sync into web dashboards.* Add predictive machine learning scoring to risk heatmaps.	* Provide automated patient lifestyle recommendation alerts.* Establish scheduled monthly clinical review cycles.
